

LocalSafe™

ECO FRIENDLY WEED CONTROL

**Parks, Gardens, Public Amenities
& Horticultural Application**

Contact Organics introduces LocalSafe Weed Terminator, the weed control for parks, gardens, sporting grounds and other public amenity areas. It uses the latest innovative technology with natural ingredients.

LocalSafe Weed Terminator is the latest in delivery technology for weed control. Developed and manufactured in Australia by Contact Organics, LocalSafe's breakthrough patented formula greatly reduces the use of poisonous and toxic weed killers. LocalSafe has been developed for use in areas that require fast and effective glyphosate-free weed control. Communities that are opposing conventional chemical weed control can now be served better.

With current media attention and the health concerns about the use of non-sustainable chemical herbicides, local government and the general public are looking for alternative weed control options.

LocalSafe is used to target weeds in public areas while taking care of people, pets and the environment.

Developed for when you need a fast and highly effective herbicide, but you have a responsibility toward the safety of others.

Is already used by several councils nationally, some have trialled LocalSafe Weed Terminator against many of its competitors both natural and chemical to find that it kept up with the chemical herbicides and outperformed the other natural herbicides.

LocalSafe is a powerful alternative to toxic weed killers. Designed to work on all types of weeds and grasses, it is safe for people, pets and the environment. Made from natural and safe ingredients, means there are no toxins or poisons that can pass into the food chain or into the human body. LocalSafe leaves no residues in the soil or in weeds, removing the risk of weeds developing resistance over time.

THE LOCALSAFE DIFFERENCE

- ✓ 1 Hour Visible Action
- ✓ Non-Toxic & Food Safe
- ✓ No Residue left in soil
- ✓ Fast & Long Lasting
- ✓ People & Pet Friendly
- ✓ Glyphosate Free
- ✓ Natural Ingredients
- ✓ Kills Weeds & Grasses
- ✓ Conditions Soils
- ✓ Suitable for all Public Areas
- ✓ Australian Made
- ✓ Rain safe After 2 Hours

**AVAILABLE
IN 20 AND
1000 LITRE**

REDUCED LABOUR COSTS

When using glyphosate weedicides, verge and park weed control can require as many as 20 treatments per annum due to build up resistance to glyphosate and other chemical products.

LocalSafe, depending on application rates, requires less passes over the ground for weed control therefore saving on fuel, time, energy, labour and even on downtime with cleanup. To add to that if there are actively growing plants that have gone to seed, LocalSafe will desiccate the seed.

MATERIALS HANDLING

With potential changes in classification of all toxic products, there will be a requirement for licensing of users, leading to special training, equipment, protective clothing etc.

HOW DOES LOCALSAFE WEED TERMINATOR WORK?

Essentially, the Weed Terminator works by dehydrating the weed. It achieves this by degrading the weed's protective outer film (to allow moisture to escape). The product is also effective in the restoration of soil health, making it difficult for weeds to compete with healthy plants and reducing their re-growth.

HOW TO APPLY

Spray to ensure complete coverage of unwanted weeds to the point of run-off. Best results are achieved when LocalSafe Weed Terminator is applied in full sun to actively growing weeds. Results are seen as browning and wilting of the weed and will be seen within 2 hours of application. The weed is totally dead within a couple of days to a week. To be effective, LocalSafe Weed Control must come into contact with the green parts of the weed. Weeds are unable to build resistance to LocalSafe due to due in part to its contact mode of action.

MAKE THE SWITCH TO LOCALSAFE. THE GLYPHOSATE FREE ALTERNATIVE.

LOCALSAFE WEED TERMINATOR

LocalSafe Weed Terminator delivers highly effective weed control, it is powerful, natural, non-staining and is rainproof in 2 hours. LocalSafe Weed Terminator is excellent value for environments that require fast acting glyphosate-free weed control.

SITUATION	WEEDS CONTROLLED	HOW TO APPLY
Gardens, paths, driveways, sheds, spot spraying in lawns and turf.	Annual weeds: Broadleaf weeds e.g., Capeweed, Burr medic, Creeping oxalis, Milk Thistle, Spear thistle, Wireweed, Blackberry nightshade. Perennial weeds*: Broadleaf weeds (e.g. Flatweed, Hair hawkbit, Lamb's tongue, Dandelion, Evening primrose), Couch grass, Paspalum, Perennial ryegrass, Kikuyu. Onion weed, Bindii and more.	Spray to complete coverage of weed surface. This product may damage lawn and turf when used as a spot spray. *Perennial weed species may require repeated applications to obtain long-term control.
Gardens, paths, rockeries, tiled roofs, walls, driveways, spot spraying in lawns and turf.	Algae, Lichen, Liverwort, Moss.	Spray to completely cover weed surface.

MIXING	
40ml LocalSafe & 40ml Soil Conditioner per liter of water for mature weeds	30ml LocalSafe & 30ml Soil Conditioner per liter of water for juvenile weeds

THE CONTACT ORGANICS FOUNDATIONS

Our core philosophy is to help nature bring life back to earth through a safe, effective alternative, so we can bring the best weed killer to Australia.

- ▶ We provide in-nature solutions to weed control and soil health to the domestic market and to industry
- ▶ We support sustainability by providing affordable, effective options to agriculture
- ▶ We invest in developing products that will benefit global agriculture through sustainability and environmental awareness
- ▶ We aim to restore balance in the environment by removing toxins from our food, thereby bringing back balance to our bodies

THE CONTACT ORGANICS STORY

After 30 years of research into the science and nature of human health and plant physiology, Contact Organics formulated the Safe Series. HomeSafe, LocalSafe and FarmSafe are the products of extensive exploration and tests, for a natural alternative to weed control.

Contact Organics Pty Ltd is an Australian company dedicated to seeking out innovative ways to create a non-toxic product range that is effective at killing weeds, rapidly.

We've spent the last three decades focusing on the research, development and production of non-toxic products. In this time, we found a correlation between illnesses and chemicals used across a range of soils and crops. And, in turn, the foods produced from these crops.

This discovery triggered our expansion into agricultural research. Surely, we thought, chemicals in herbicides would have a negative effect on the food we eat?

It turned out we were right.

The industry was missing effective, non-toxic weed control products. Thus, the Safe Series was created.
